

FERODO FUSE+ Technology

How to recognize what friction material is in the box?

To determine the Brake Pad Technology in the box, check the Friction Material code. This can be found on the label on the back of the box and on the back plate of the brake pad. Fuse+ Technology is a new technology within the existing ECO Friction Zero Copper range. To promote this new technology dedicated Fuse+ Technology brake pad packaging is being introduced as a running change from October 2021.

Fuse+ Technology Brake Pad Box

Part Number

FDB4670

Material Number

FER9001

Label on the back of the box
Fuse+ Technology FER9001
